**Exam Name:** Managing Office 365 Identities and Requirements

**Version:** Demo

## Topic 1, Fabrikam, Inc

### OverView

Fabrikam, inc is a financial services organization.

Fabrikam recently purchased another financial services organization named Contoso, Ltd.

Fabrikam has 2000 users. Contoso has 500 users.

Windows 10 and office 2016 are deployed to all computers.

### Physical Location:

Fabrikam has an office in the United States. Contoso has an office in the United Kingdom.

The offices connect to each other by using a WAN link. Each office also connects directly to the internet.

### Existing Environment:

#### Active Directory:

The network Fabrikam contains an Active Directory forest.

The Active Directory environment of Contoso was migrated to the Active Directory forest of Fabrikam. The forest contains three domains named fabrikam.com , contractor.fabrikam.com, and contoso.com.

All domain controllers run Windows Server 2008 R2.

All contractors outsourced by fabrikam use the user principal name (UPN) suffix of contractor.fabrikam.com. If fabrikam hires the contractor as a permanent employee, the UPN suffix changes to fabrikam.com.

### Network

The network has the following configurations:

- \* External IP address for the United States office: 192.168.1.100
- \* External IP address for the United Kingdom office: 192.168.2.100
- \* Internal IP address range for the United States office: 10.0.1.0/24
- \* Internal IP address range for the United Kingdom office : 10.0.2.0/24

### Active Directory Federation Services (ADFS)

AD FS and web Application Proxies are deployed to support an app for the sales department. The app is accessed from the Microsoft Azure Portal.

### Office 365 Tenant

You have an Office 365 subscription that has the following configurations:

- \* Organization name: Fabrikam Financial Services.

- \* Vanity domain: Fabrikamfinancialservices.onmicrosoft.com
- \* Microsoft SharePoint domain: Fabrikamfinancialservices .sharepoint.com
- \* Additional domain added to the subscription: Contoso.com and fabrikam.com

**Requirements:**

**Planned Changes:**

- \* Deploy Azure AD connect.
- \* Move mailboxes from Microsoft Exchange 2016 to Exchange Online.
- \* Deploy Azure multi-factor authentication for devices that connect from untrusted networks only.
- \* Customize the AD FS sign-in webpage to include the Fabrikam logo, a helpdesk phone number, and a sign-in description.
- \* Once all of the Fabrikam users are replicated to Azure Active Directory (Azure AD), assign an E3 license to all of the users in the United States office.

**Technical Requirements:**

Contoso identifies the following technical requirements:

- \* When a device connects from an untrusted network to https://outlook.office.com, ensure that users must type a verification code generated from a mobile app.
- \* Ensure that all users can access office 365 services from a web browser by using either a UPN or their primary SMTP email address.
- \* After Azure AD connect is deployed, change the UPN suffix if all the users in the Contoso sales department to fabrikam.com.
- \* Ensure that administrator are notified when the health information of Exchange Online changes.
- \* User Office 365 reports to review previous tasks performed in Office 365.

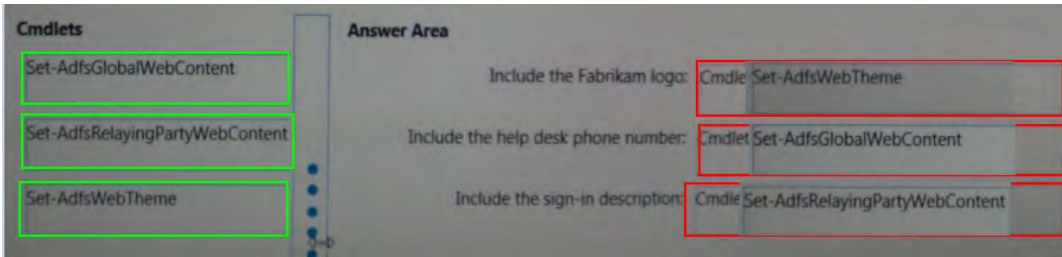

**Question No : 1 DRAG DROP - (Topic 1)**

You need to ensure that all of the planned changes for the AD FS sign-in webpage are performed successfully.

Which cmdlet should you use to perform each change? To answer, drag the appropriate cmdlets to the correct types of change. Each cmdlet may be used once, more than once or not at all. You may need to drag the split bar between panes or scroll to view content

**Answer:**

**Question No : 2 - (Topic 1)**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolDomainToStandard for the fabrikam.com domain and the contoso.com domain.

Does this meet the goal?

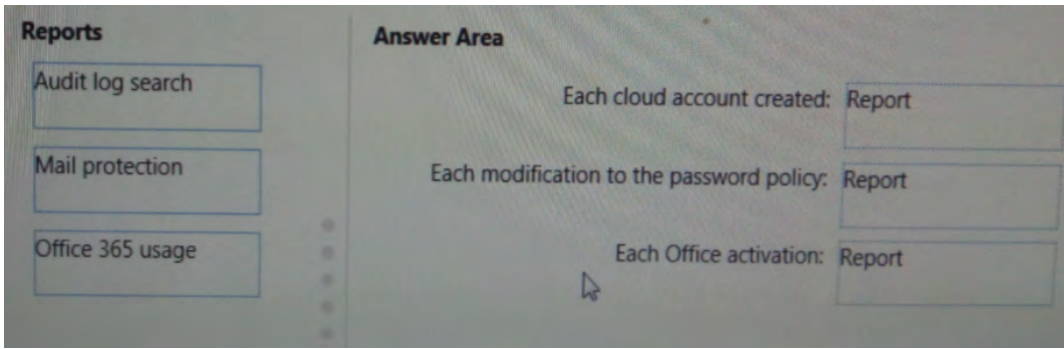

- A. Yes
- B. No

**Answer: A**

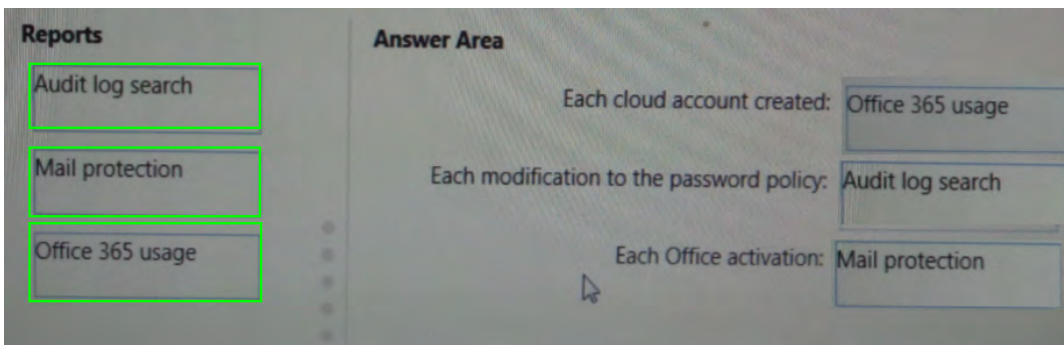

**Question No : 3 DRAG DROP - (Topic 1)**

You need to identify which report must be used to view previous tasks performed in Office 365.

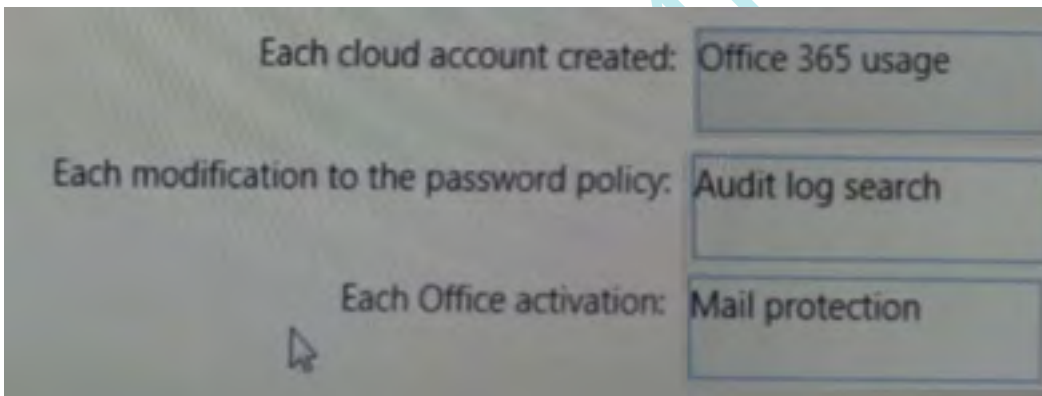

Which type of report should you use for each task? To answer, drag the appropriate reports to the correct tasks. Each report may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content

Answer:

Explanation:

C:\Users\Kamran\Desktop\sample.jpg

**Question No : 4 - (Topic 1)**

You need to recommend a solution to meet the **technical requirement** for monitoring the **health** information.

What should you recommend?

- A. From the Office 365 admin center modify the Services & add-ins settings.
- B. B. From the Office 365 admin center modify the Organization Profile settings.
- C. Use the Company Portal app to receive push notifications.
- D. Use the Office 365 Admin app to receive push notifications.

Answer: C

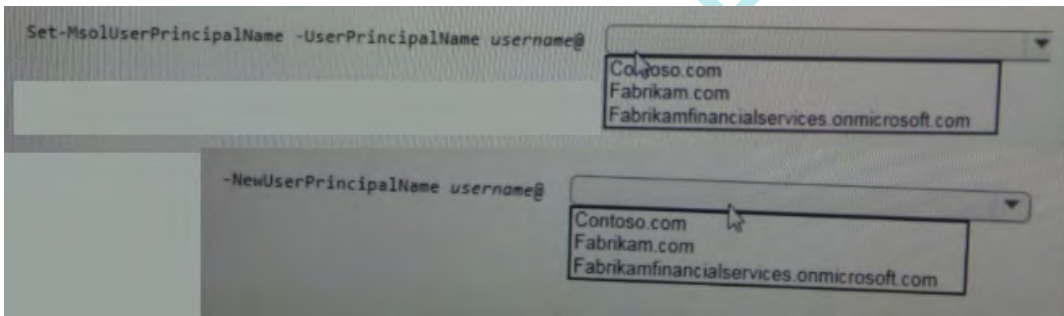

**Question No : 5 HOTSPOT - (Topic 1)**

You deploy Azure AD Connect

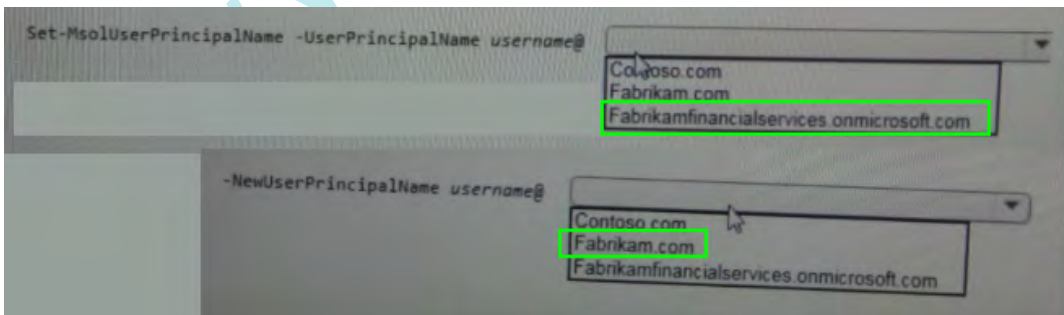

You modify the UPN suffix of each sales department user to fabrikam.com..

You need to ensure that the Active Directory changes are updated in Office 365.

What command should you run? To answer, select the appropriate options in the answer area.

Answer:

**Question No : 6 - (Topic 1)**

Note: This question is part of a series of questions that present the sonic scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to configure the Office 365 subscription 1o ensure that Active Directory users on conned to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolFederatedUser for all users.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

**Question No : 7 - (Topic 1)**

**You need** to modify the Office 365 subscription **to support the planned changes for the devices that**

**connect from untrusted** networks.

**You enable** Azure multi-factor authentication for **all of the users in the subscription**. What should **you do** next from **the Office 365 portal**?

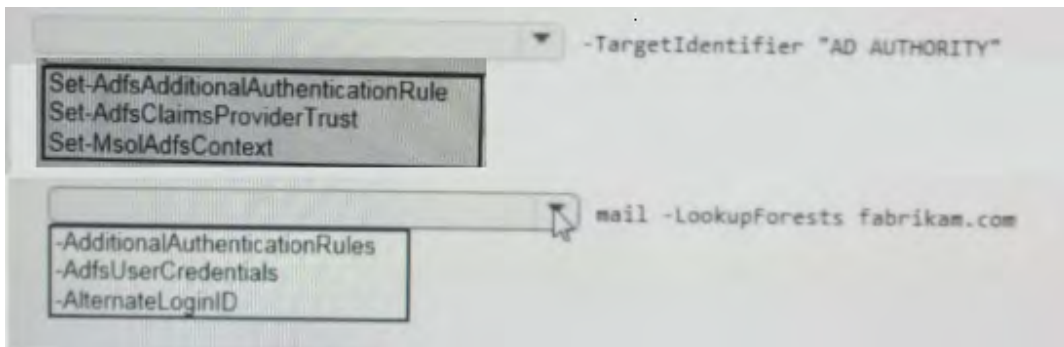

- A. Add a trusted domain.
- B. Set the Trusted IPs to 10.0.1.0/24 and 10.0.2.0/24.
- C. Set the Trusted IPs to 192.168.1.100/32 and 192.168.2.100/32
- D. Convert the fabrikam.com domain to a federated domain.

Answer: A

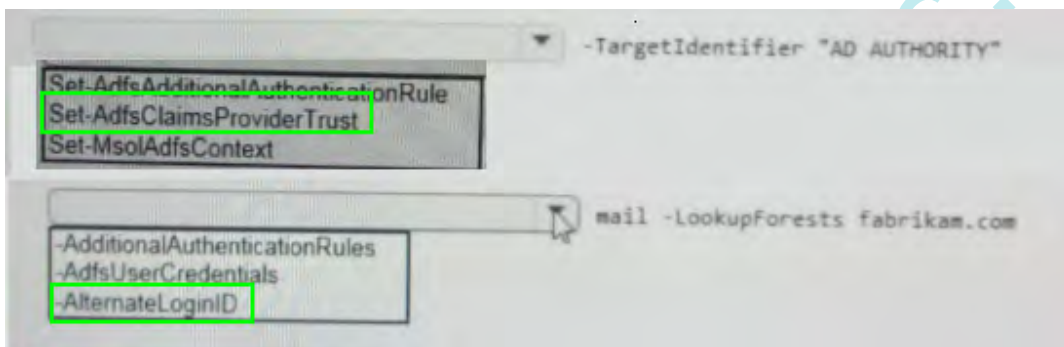

**Question No : 8 HOTSPOT - (Topic 1)**

You need to configure the AD FS servers to meet the technical requirement for accessing Office 365 from a web browser.

What command should you run? To answer, select the appropriate options in the answer area.

**Answer:**

**Topic 2, Mix Questions Set**

**Question No : 9 HOTSPOT - (Topic 2)**

You are the Exchange Online administrator for an organization. The organization migrates all users to Exchange Online. An employee works for a partner organization named Contoso, Ltd. The employee uses the email alias employeeel@contoso.com.

Users report that over the past week, they have not received email messages from employeeel@contoso.com.

You need to trace email messages that originate from employeeel@contoso.com to users inside your organization.

In the message trace window, which two settings should you configure? To answer, select the appropriate objects in the answer area.

Search for email messages from or to a user or users. You can specify user names or fully qualified email addresses. Wildcards are supported.

Sender:

Recipient:

Message was sent or received:

Delivery status:

Message ID:

**Answer:**

**Question No : 10 DRAG DROP - (Topic 2)**

A company has a Windows Server 2008 domain controller and a SharePoint 2007 farm. All servers on the network run Windows Server 2008.

You must provide single sign-on for Office 365 SharePoint sites from the company's network.

You need to install the required software.

What should you install? To answer, drag the appropriate action to the correct location. Each answer may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

The screenshot shows a drag-and-drop interface. On the left, there is a list of software components: ".NET Framework 3.5 with Service Pack 1", "AD FS 2.0", "Rollup 3 for AD FS 2.0", "SharePoint Server 2013", and "SharePoint Server 2010 with Service Pack 1". On the right, there is an "Answer Area" containing a table with 5 steps. The table is currently empty, with only the headers "Step" and "Action" visible.

Step	Action
1.	Install
2.	Install
3.	Install
4.	Configure trusts between environments
5.	Configure Active Directory synchronization

**Answer:**

The screenshot shows the same drag-and-drop interface as above, but now the software components are placed in the "Action" column of the table. The components are highlighted with red boxes in the original image. The components are: ".NET Framework 3.5 with Service Pack 1" for Step 1, "AD FS 2.0" for Step 2, and "Rollup 3 for AD FS 2.0" for Step 3. The other steps (4 and 5) remain empty.

Step	Action
1.	Install .NET Framework 3.5 with Service Pack 1
2.	Install AD FS 2.0
3.	Install Rollup 3 for AD FS 2.0
4.	Configure trusts between environments
5.	Configure Active Directory synchronization

**Question No : 11 - (Topic 2)**

A Company has an Office 365 tenant that has an Enterprise E1 subscription. You synchronize disabled user accounts from an Active Directory domain Services environment.

You need to enable the user accounts in Office 365.

Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkededUser
- H. New-MsolUser

**Answer: A**

**Explanation:** When you dirsync a disabled user from on premise to Office 365 the user is created in Office 365 with the BlockCredential attribute set to True. The set-msoluser - userprincipalname -BlockCredential \$false will enable that account.

**Question No : 12 - (Topic 2)**

An organization plans to migrate to Office 365.

You need to estimate the post-migration network traffic.

Which tool should you use?

- A. Lync 2013 Bandwidth Calculator
- B. Process Monitor
- C. Microsoft Network Monitor
- D. Microsoft OnRamp Readiness tool

**Answer: A**

**Explanation:**

Office 365 includes Lync 2013.

With this latest version of the Microsoft Lync Server 2010 and 2013 Bandwidth Calculator, you can enter information about your users and the Lync Server features that you want to deploy, and the Bandwidth Calculator will determine bandwidth requirements for the WAN that connects sites in your deployment. The accompanying Bandwidth Calculator User Guide describes the recommended process for estimating your WAN bandwidth needs for Lync client real-time traffic.

Reference: Lync Server 2010 and 2013 Bandwidth Calculator Version 2.0

<http://blogs.technet.com/b/nexttop/archive/2013/06/07/lync-server-2010-and-2013-bandwidth-calculator-version-2-0.aspx>

**Question No : 13 DRAG DROP - (Topic 2)**

A company has an Active Directory Domain Services domain. You plan to implement Active Directory Federation Service (AD FS) with single sign-on.

You have the following requirements:

- Servers must be Windows Server 2012 R2.
- Internet-facing servers must be placed in the perimeter network.
- The solution must support at least 105 AD FS trust relationships.

You need to deploy the appropriate roles. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Answer:**

**Explanation:**

Perimeter: Web Application ProxyApplication: AD FSDatabase: SQL (required above 100 Relay Party Trusts)

**Question No : 14 - (Topic 2)**

A company deploys an Office 365 tenant.

You must provide an administrator with the ability to manage company information in Office 365.

You need to assign permissions to the administrator by following the principle of least privilege.

Which role should you assign?

- A. Global administrator
- B. Service administrator
- C. Billing administrator
- D. User management administrator

**Answer: A**

Reference: [http://onlinehelp.microsoft.com/en-in/office365-enterprises/gg243432.aspx#bkmk\\_EditProfile](http://onlinehelp.microsoft.com/en-in/office365-enterprises/gg243432.aspx#bkmk_EditProfile)

**Question No : 15 - (Topic 2)**

You have an Office 365 tenant that uses an Enterprise E3 subscription. You activate Azure Rights Management for the tenant.

You must test the service with the Development security group before you deploy Azure Rights Management for all users.

You need to enable Azure Rights Management for only the Development security group.

Which Windows PowerShell cmdlet should you run?

- A. Enable-Aadrm
- B. New-AadrmRightsDefinition
- C. Enable-AadrmSuperUserFeature
- D. Add-AadrmSuperUser
- E. Set-AadrmOnboardingControlPolicy

**Answer: E**

**Explanation:**

The Set-AadrmOnboardingControlPolicy cmdlet sets the policy that controls user onboarding for Azure Rights Management. This cmdlet supports a gradual deployment by controlling which users in your organization can protect content by using Azure Rights Management.

Example:

Restrict Azure RMS to users who are members of a specified group

This command allows only users that are members of the security group with the specified object ID to protect content by using Azure Rights Management. The command applies to Windows clients and mobile devices.

Windows PowerShell

```
PS C:\> Set-AadrmOnboardingControlPolicy -UseRmsUserLicense $False -  
SecurityGroupObjectId "f
```

**Question No : 16 HOTSPOT - (Topic 2)**

An organization has over 10,000 users and uses a SQL-based Active Directory Federation Services (AD FS) server farm.

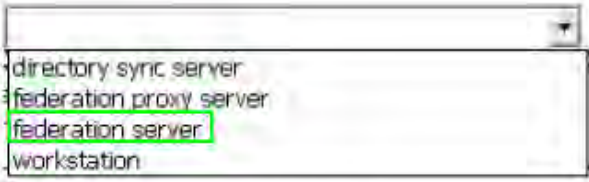

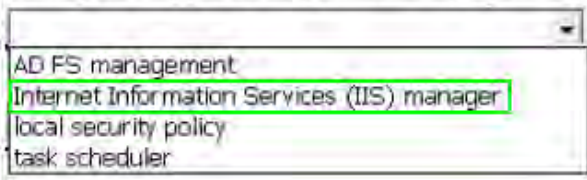

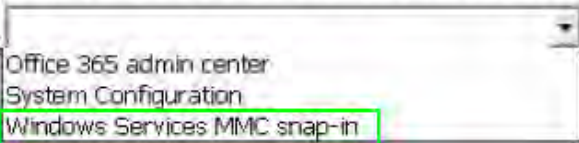

You need to change the AD FS 2.0 service account password.

What should you do? Select the correct answer from each list in the answer area.

Step	Action
1.	Log on to each <input type="text"/>
2.	Modify the application pool identity by using the <input type="text"/>
3.	Modify the AD FS 2.0 Windows Service Properties by using the <input type="text"/>

Step	Action
1.	Log on to each <input type="text"/> <ul style="list-style-type: none"> <li>directory sync server</li> <li>federation proxy server</li> <li>federation server</li> <li>workstation</li> </ul>
2.	Modify the application pool identity by using the <input type="text"/> <ul style="list-style-type: none"> <li>AD FS management</li> <li>Internet Information Services (IIS) manager</li> <li>local security policy</li> <li>task scheduler</li> </ul>
3.	Modify the AD FS 2.0 Windows Service Properties by using the <input type="text"/> <ul style="list-style-type: none"> <li>Office 365 admin center</li> <li>System Configuration</li> <li>Windows Services MMC snap-in</li> </ul>

Answer:

Step	Action
1.	Log on to each 
2.	Modify the application pool identity by using the 
3.	Modify the AD FS 2.0 Windows Service Properties by using the 

### Question No : 17 - (Topic 2)

A company has an Office 365 tenant. The company uses a third-party DNS provider that does not allow TXT records.

You need to verify domain ownership.

What should you do?

- A. Create an MX record.
- B. Create a CNAME record.
- C. Create an A record.
- D. Create an SRV record.

**Answer: A**

**Explanation:**

Add a TXT or MX record for DNS verification.

Reference: Change nameservers to set up Office 365 with any domain registrar

<https://support.office.com/en-us/article/Change-nameservers-to-set-up-Office-365-with-any-domain-registrar-a8b487a9-2a45-4581-9dc4-5d28a47010a2>

**Question No : 18 - (Topic 2)**

A company deploys an Office 365 tenant in a hybrid configuration with Exchange Server 2013.

Office 365 users cannot see free/busy information that is published from the on-premises Exchange Server. In addition, Exchange Server users cannot see free/busy information that is published from Office 365.

You need to troubleshoot why users cannot access free/busy information from both Office 365 and Exchange Server 2013.

Which tool should you run?

- A. The Hybrid Configuration wizard
- B. The Remote Connectivity Analyzer with the Exchange Server tab selected
- C. The Microsoft Connectivity Analyzer Tool
- D. The Remote Connectivity Analyzer with the Office 365 tab selected

**Answer: D**

**Question No : 19 - (Topic 2)**

Your company subscribes to an Office 365 Plan E3. A user named User1 installs Office Professional Plus for Office 365 on a client computer. From the Microsoft Online Services portal, you assign User1 an Office Professional Plus license. One month after installing Office, User1 can no longer save and edit Office documents on the client computer. User1 can open and view Office documents.

You need to ensure that User1 can save and edit documents on the client computer by using office.

What should you do?

- A. Install the Office Customization Tool.
- B. Reinstall Office Professional Plus.
- C. Install the Microsoft Online Services Sign-in Assistant.
- D. Upgrade the subscription to Plan E4.

**Answer: C**

Reference: [http://technet.microsoft.com/en-us/library/gg702619\(v=office.15\).aspx](http://technet.microsoft.com/en-us/library/gg702619(v=office.15).aspx)

**Question No : 20 - (Topic 2)**

You have an Office 365 subscription.

All users have mailboxes hosted in Microsoft Exchange Online.

The network administrators in your organization are updating the network infrastructure, including making changes to the DNS providers and updating the SSL certificates.

You need to perform the following test in the Exchange Online environment:

- Verify that the mail exchanger (MX) records for Exchange Online are published correctly.
- Send a test message from an external recipient to an Exchange Online recipient
- Verify that the SMTP service is accessible from the Internet.

Which tool should you use?

- A. Microsoft Connectivity Analyzer Tool
- B. Microsoft Office 365 Client Performance Analyzer
- C. Office 365 health, readiness and connectivity checks
- D. Microsoft Remote Connectivity Analyzer.

**Answer: A**

**Question No : 21 - (Topic 2)**

You use a centralized identity management system as a source of authority for user account information. You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for on-premises solutions. You are configuring the Windows Azure Active Directory Sync tool.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users. What should you do?

- A. Use the Office 365 admin center to import the file.
- B. Create a Windows PowerShell script to import account data from the file into Active Directory.
- C. Use the Windows Azure Management Portal to import the file.
- D. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.

**Answer: B**

**Question No : 22 - (Topic 2)**

You use a centralized identity management system as a source of authority for user account information- You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for on premises solutions- You are also using Azure AD Connect.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users.

What should you do?

- A. Create a Windows PowerShell script to import account data from the tile into Active Directory.
- B. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.
- C. Use the Azure Management portal to import the file.
- D. Use the office 365 admin center to import the file.
